

BRISKPARK SOLUTIONS OVERVIEW

BriskPark offers a diverse range of parking access and revenue control equipment with the option to add on a variety of solutions based on the requirements of a property. First, BriskPark's innovative lineup of parking hardware propels traditional equipment, such as parking gates, into the future. All of the hardware, when backed by the WorldStream Cloud Portal, can then be easily integrated into LocoMobi World's solution-based add-ons, all of which solve critical issues and provide the highest level of safety, security, and convenience for all parties involved.

BriskPark Parking Equipment Hardware

BriskPark's state-of-the-art parking equipment hardware can be configured with the below solution-based add-ons to create a frictionless and seamless parking experience in a broad range of environments such as municipalities and garages, commercial and residential buildings, hotels, airports, medical centres, and universities.

WorldStream Cloud Portal

The WorldStream cloud-based portal allows control and configuration of all systems from anywhere in the world. Get live video streams from cameras, open gates, change pricing, and more. Self-check and self-healing keeps the system running and alerts you to problems. Advanced Alerts uses artificial intelligence to identify tailgaters and provides you with license plate numbers and other information in real-time.

SOLUTION-BASED ADD-ONS

PassagePass

The PassagePass App allows users to pay for parking on a mobile device. LPR Express then allows customers to opt-in to LPR Express on the PassagePay app. When a customer drives to a LPR Express powered parking lot, the gate scans their license plate and allows them access – no tickets, fobs, or QR codes required. The touchless system is completely frictionless with no need to fumble around with the app during the customer's parking experience. Upon exit, the LPR Express system reads the vehicle's license plate and the customer drives out with no interaction required. Customers will be notified of the session ending via SMS and the amount they were billed.

The system is ideal for parking facility owners and managers as it serves both monthly users and infrequent transient users. The system provides a comprehensive audit trail to track usage and payment. With video evidence and date and time authentication, owners and managers are able to resolve potential disputes.

LPR Express

LPR Express is first in class in License Plate Recognition. The LPR access cameras read license plates upon vehicle entry and exit of the parking garage in seconds. It then grants automated gate access for tenants, customers, visitors, and registered guests without the use of permits, fobs, or key cards, providing a frictionless experience for drivers. Using artificial intelligence and algorithms, our system is able to achieve 99.9% read rates. Secondary innovation guarantees 100% access (no missed plates.)

CallWhenHere

The CallWhenHere feature allows tenants, customers, and visitors access to a property by simply speed-dialling the gate/door call number from their vehicle. Access will only be granted if the tenants, customers or visitors' phone number is registered and active at the time they call. CallWhenHere allows for "accessory-free access" as there are no cameras, major hardware, or apps to install, and no requirement for Bluetooth. With this management software, concierge staff and property managers are able to manage tenant, customer, and visitor parking through online portal access, eliminating lost or shared fobs or access keys.
