TRACK, MANAGE, & MONETIZE YOUR PARKING **STALLS**

Spot Informant is a cloud-based system that offers real-time stall usage reports with abuse alarms. Retail locations lose substantial revenue as potential patrons go elsewhere when parking is full. Spot Informant fixes this issue by showing the exact stalls where cars are over the allowed maximum length of stay. Property managers, owners, and concierges will understand in real-time when and how many parking stalls are available, allowing them to intelligently control access. The system provides critical insight into parking trends such as peak parking periods, length of stay, and more. Great for both gated or non gated lots.

HIGHLIGHTS

- $\widehat{\diamondsuit}$ Maximizes parking stall occupancy revenues while decreasing manpower costs
- Cloud-based system providing data in real time with per-stall audit reports
- Eliminates manual tracking of occupied spots & traffic congestion
- Enforcement companies can monitor multiple properties at once
- Patrons have the ability to extend their length of stay by registering their stall number with the property owner no license plate number required
